Bushing Liner

Virtually Eliminates Noise, Vibration and Harshness

Finger Lakes Specialty Products' (FSP) proprietary Bushing Liners, when incorporated into your rubber or urethane bushings, virtually eliminate noise, vibration and harshness and provide that noise free feature longer than any other method of internal lubrication available on the market today.

The 100% TEFLON filament pile woven into the fabric gives a clean, oil free surface that will perform for the life of the bushing. It requires no maintenance and substantiates the reliability and long life advertised by the automobile manufacturers and aftermarket suppliers who use FSP liners.

For more information on our products or to discuss a product development opportunity, please don't hesitate to contact us at: sales@fingerlakes-sp.com or 585.627.5919.
